

DraganFly Innovations Inc.

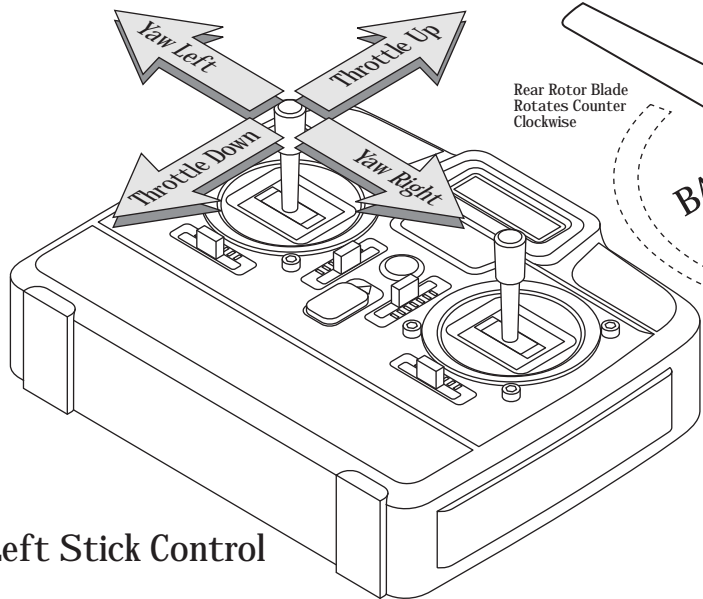

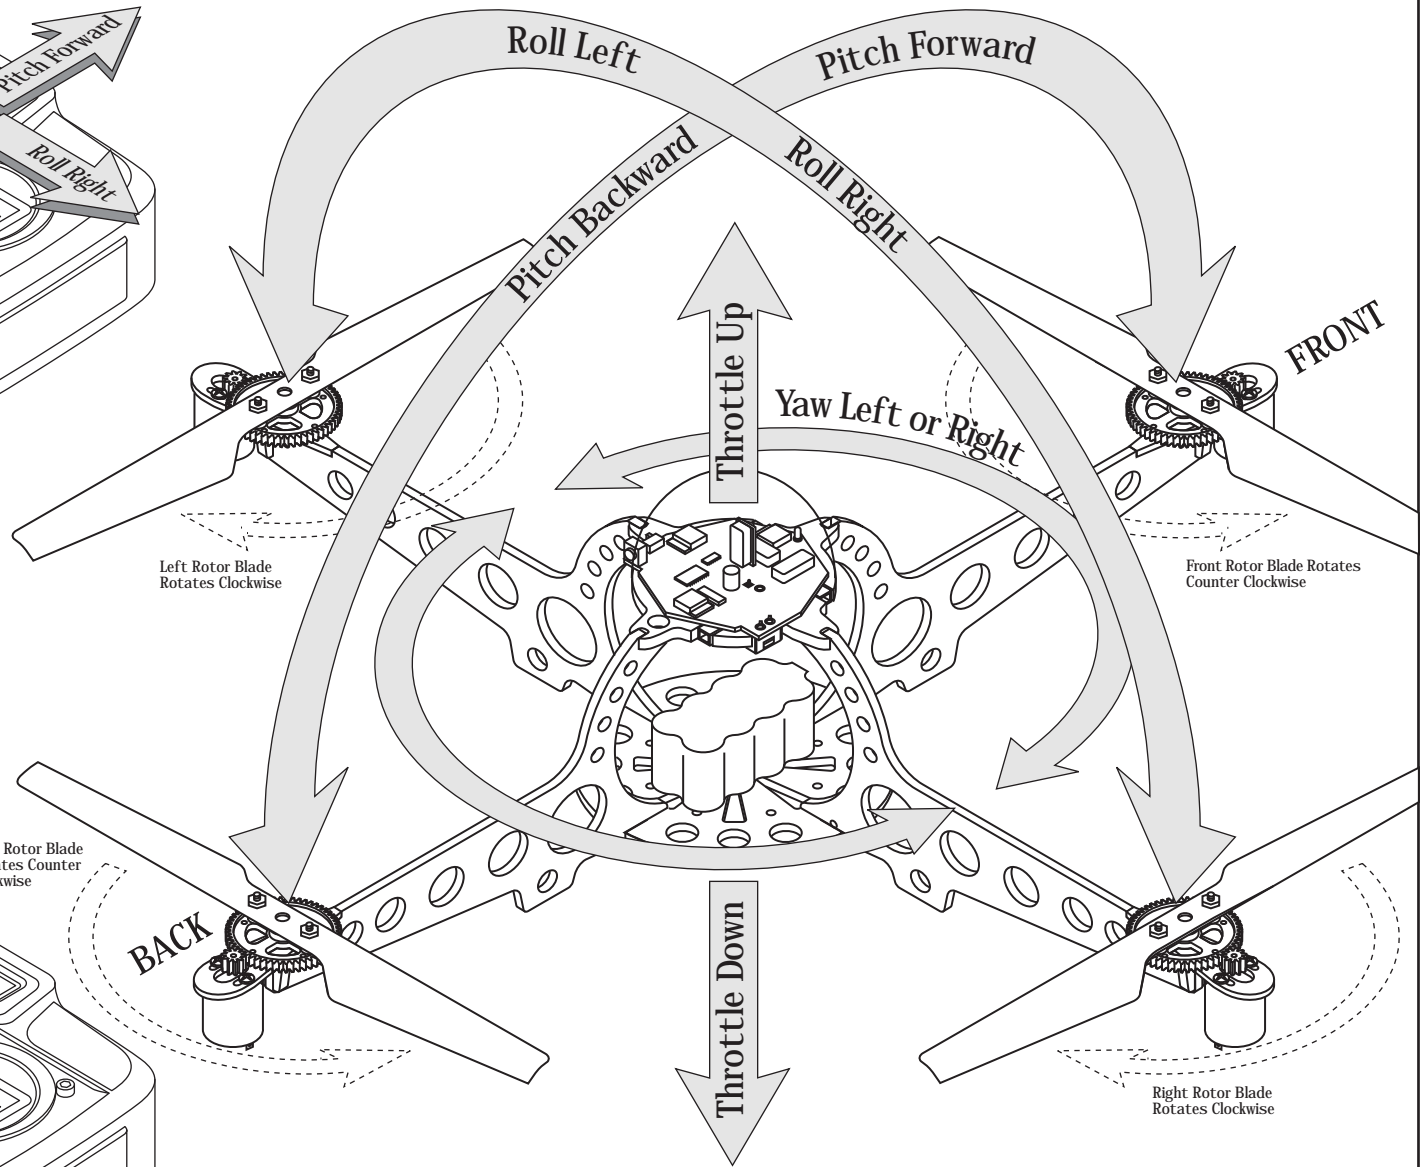

**** WARNING! ****
Do not connect the flyer servo connectors directly to an "OLD" style Airtronics receiver. Doing so without the proper modifications WILL destroy your receiver. You MUST use an adapter on the throttle connector to reverse the power leads. We recommend the MAXX2559JAAR adapter for this purpose. The aileron, elevator and rudder connectors do not require an adapter BUT should be plugged in as shown below. See Warning Sheet for more information
